

CHEMICAL IP

CHEMISTRY / SYSTEMS / SCALE

BUSINESS GROUPS / MANUFACTURING + SUPPLY

OFI Manufacturing

Midland production, tolling, private label, and regional supply.

OFI converts developed chemistry into reliable supply through flexible manufacturing and protected commercial channels.

A manufacturing bridge

OFI supplies the production and commercial execution that take a qualified product to market.

MIDLAND, TEXAS

An established approximately 6,000-square-foot production footprint with multiple reactors, blending, and packaging capability.

FLEXIBLE SUPPLY

Bulk and packaged supply, customer-specific formulation, toll conversion, and private-label production.

NEAR-DEMAND MODELS

Regional and modular production concepts reduce transport distance and support responsive replenishment where volume supports deployment.

QUALITY LINKAGE

Defined raw materials, batch records, analytical release, and traceability connect each lot to the field application.

Plant scope and available capacity are confirmed for each project and product.

Commercial formats

A manufacturer can be the invisible engine behind a distributor or the accountable supply partner to an operator.

TOLL MANUFACTURING

Convert customer-owned feedstocks or technology under agreed specifications.

PRIVATE LABEL

Support protected customer and distributor brands with controlled recipes and supply boundaries.

CUSTOM MANUFACTURE

Develop account-specific products with Chemical IP and produce them at a practical scale.

DEDICATED CAPACITY

Evaluate local or customer-site production when freight, volume, and continuity justify an asset.

The economics include conversion cost, freight, inventory, quality, and speed of response.

Program development

Move from an application target to a repeatable manufacturing arrangement.

QUALIFY PRODUCT

Confirm chemistry, target specification, materials compatibility, and analytical release methods.

ENGINEER THE ROUTE

Select batch, continuous, blending, or modular processing and establish the process-safety basis.

PILOT AND COST

Run representative campaigns and build a delivered-cost model for the customer's volume and location.

CONTRACT AND SUPPLY

Define forecast, quality terms, channel protection, replenishment, and performance support.

OFI can pair production with Chemical IP technical service and Kane-built equipment.
